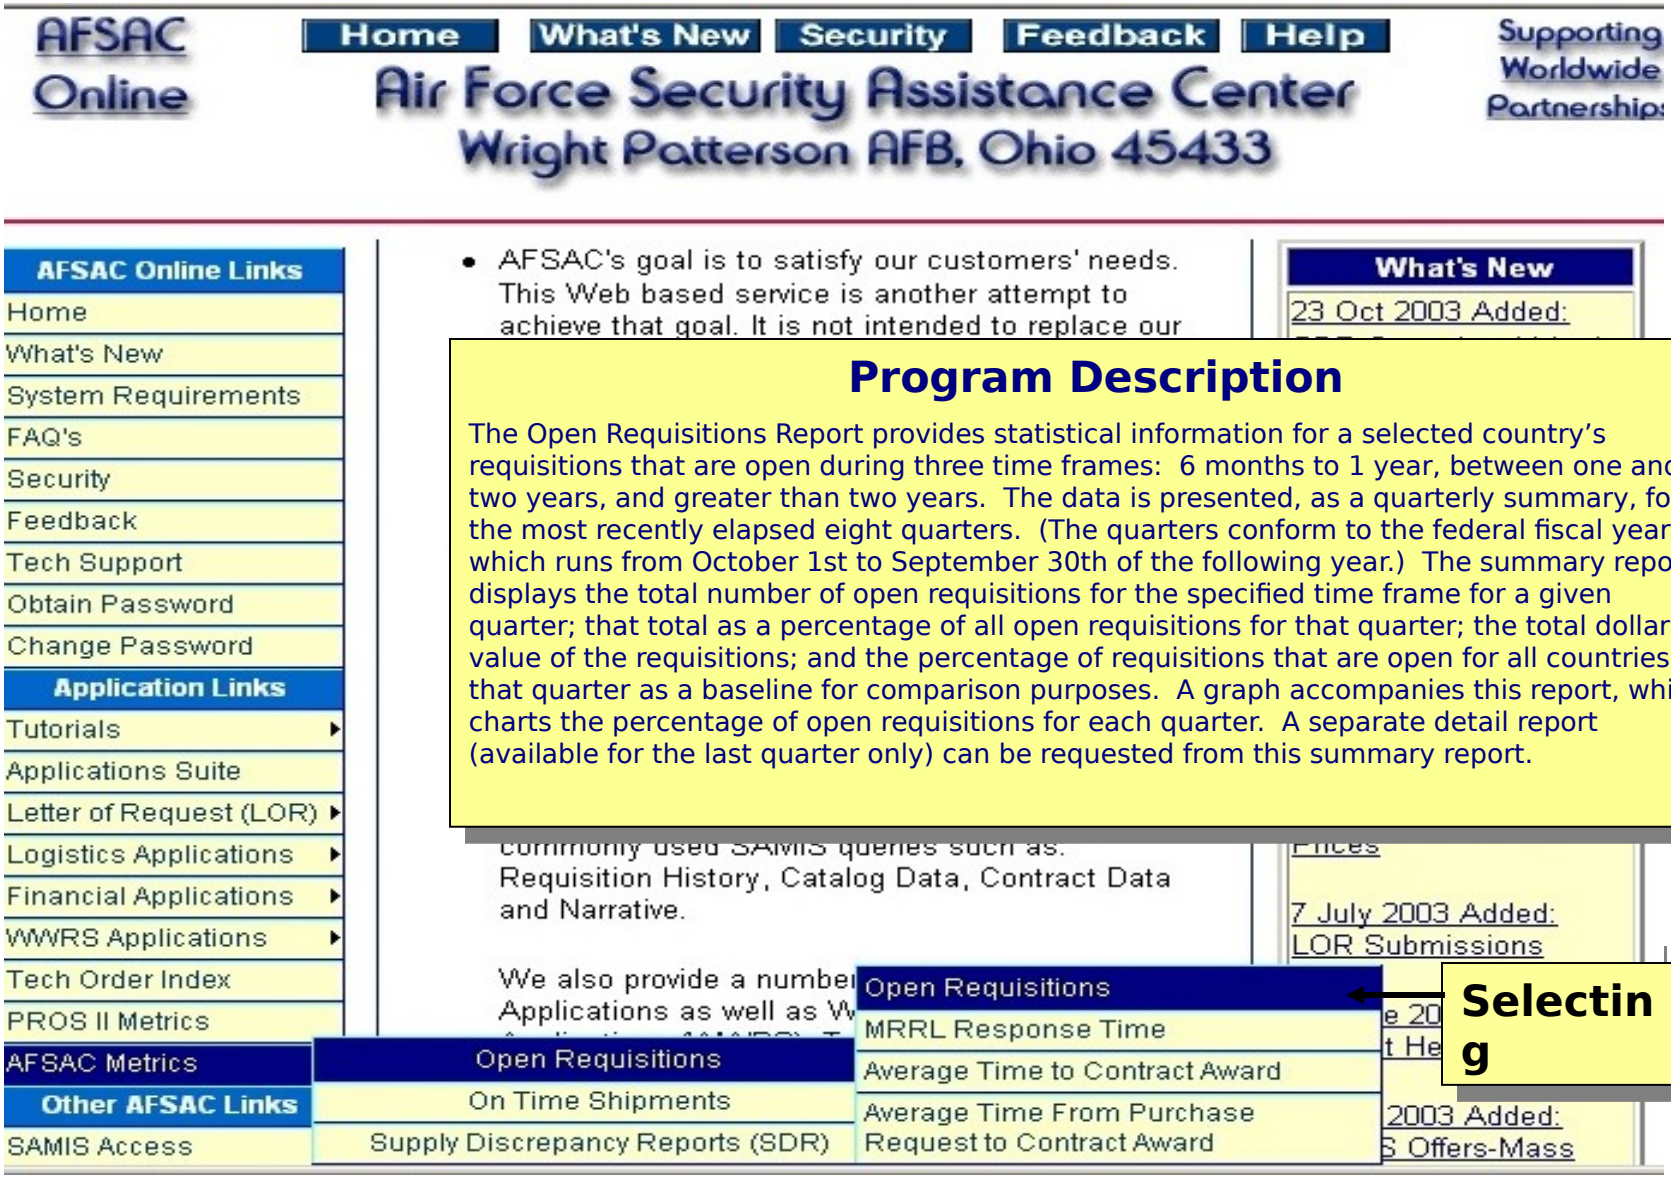
Open Requisitions

AFSAC



Program Description

The Open Requisitions Report provides statistical information for a selected country's requisitions that are open during three time frames: 6 months to 1 year, between one and two years, and greater than two years. The data is presented, as a quarterly summary, for the most recently elapsed eight quarters. (The quarters conform to the federal fiscal year, which runs from October 1st to September 30th of the following year.) The summary report displays the total number of open requisitions for the specified time frame for a given quarter; that total as a percentage of all open requisitions for that quarter; the total dollar value of the requisitions; and the percentage of requisitions that are open for all countries for that quarter as a baseline for comparison purposes. A graph accompanies this report, which charts the percentage of open requisitions for each quarter. A separate detail report (available for the last quarter only) can be requested from this summary report.

Program Description
The Open Requisitions - Average Time to Contract Award Report provides statistical information for a selected country's requisitions that have been placed on contract. The data is presented, as a quarterly summary, for the most recently elapsed eight quarters. (The quarters conform to the federal fiscal year, which runs from October 1st to September 30th of the following year.) The summary report displays the total number of the selected country's open requisitions placed on contract during a given quarter; the total dollar value of the requisitions; and the average time (in days) needed to get the requisitions on contract. A separate set of data for all countries, with the same statistical information, is displayed beneath the selected country's data. A graph accompanies this report, which charts the average days needed to get requisitions on contract for each quarter for both the selected country and all countries. A separate detail report (available for the last quarter only) can be requested from this summary report.

AFSAC Metrics
On Time Shipments

AFSAC

Program Description

The On Time Shipments Metric provides statistical shipments information including the percent of on time shipments, the average number of days for shipments, the standard deviation of the average days, the count of on time shipments, the count of shipments considered for the statistics, the count of shipments excluded from the statistics due to missing data, and the dollar value of the considered shipments. Every row of data can be presented graphically.

Reporting is quarterly for a two year period ending with the most recently closed quarter. (The quarters conform to the federal fiscal year, which runs from October 1st to September 30th.)

The report is laid out in two sections, programmed and non-programmed, with a graph and a table for each section. Programmed and non-programmed sections support independent goals.

Per the AFSAC metrics standard that all metrics allow comparing a specified country to the all countries average, within each section, each of the rows of data are provided in the table for the specified country and for the all countries average. Every row of data, i.e. the specified country's row versus the all counties' average row, can be displayed in the graph by clicking on the row.

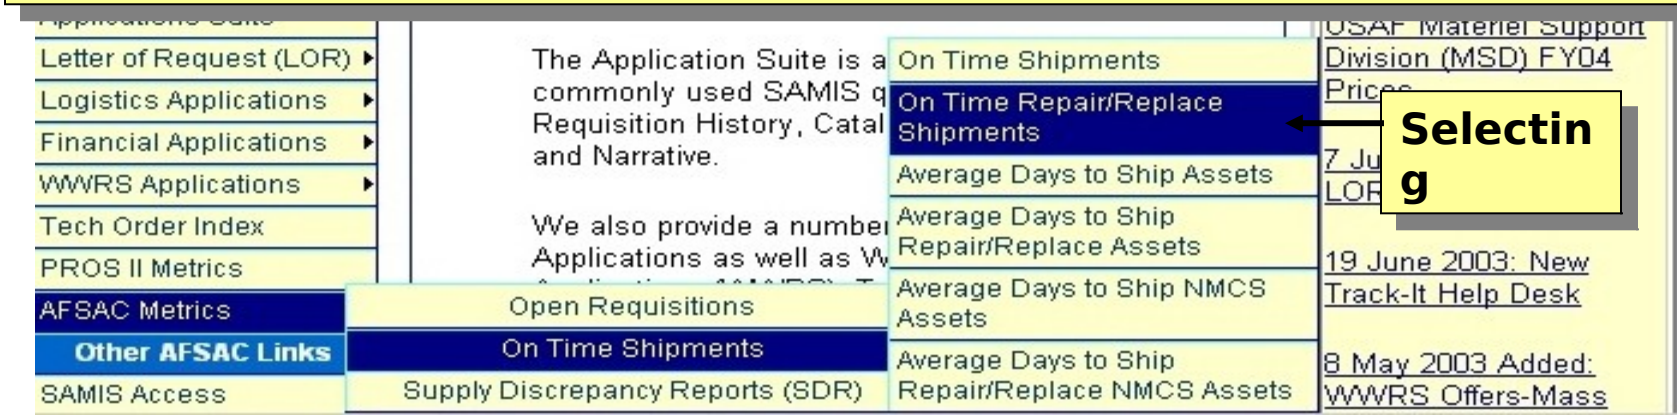
Program Description

The On Time Repair / Replace (H Coded) Shipments Metric provides statistical shipments information including the percent of on time shipments, the average number of days for shipments, the standard deviation of the average days, the count of on time shipments, the count of shipments considered for the statistics, the count of shipments excluded from the statistics due to missing data, and the dollar value of the considered shipments. Only Repair / Replace (H Coded) shipments are considered. Every row of data can be presented graphically.

Reporting is quarterly for a two year period ending with the most recently closed quarter. (The quarters conform to the federal fiscal year, which runs from October 1st to September 30th.)

The report is laid out in two sections, programmed and non-programmed, with a graph and a table for each section. Programmed and non-programmed sections support independent goals.

Per the AFSAC metrics standard that all metrics allow comparing a specified country to the all countries average, within each section, each of the rows of data are provided in the table for the specified country and for the all countries average. Every row of data, i.e. the specified country's row versus the all counties' average row, can be displayed in the graph by clicking on the row.



AFSAC Metrics
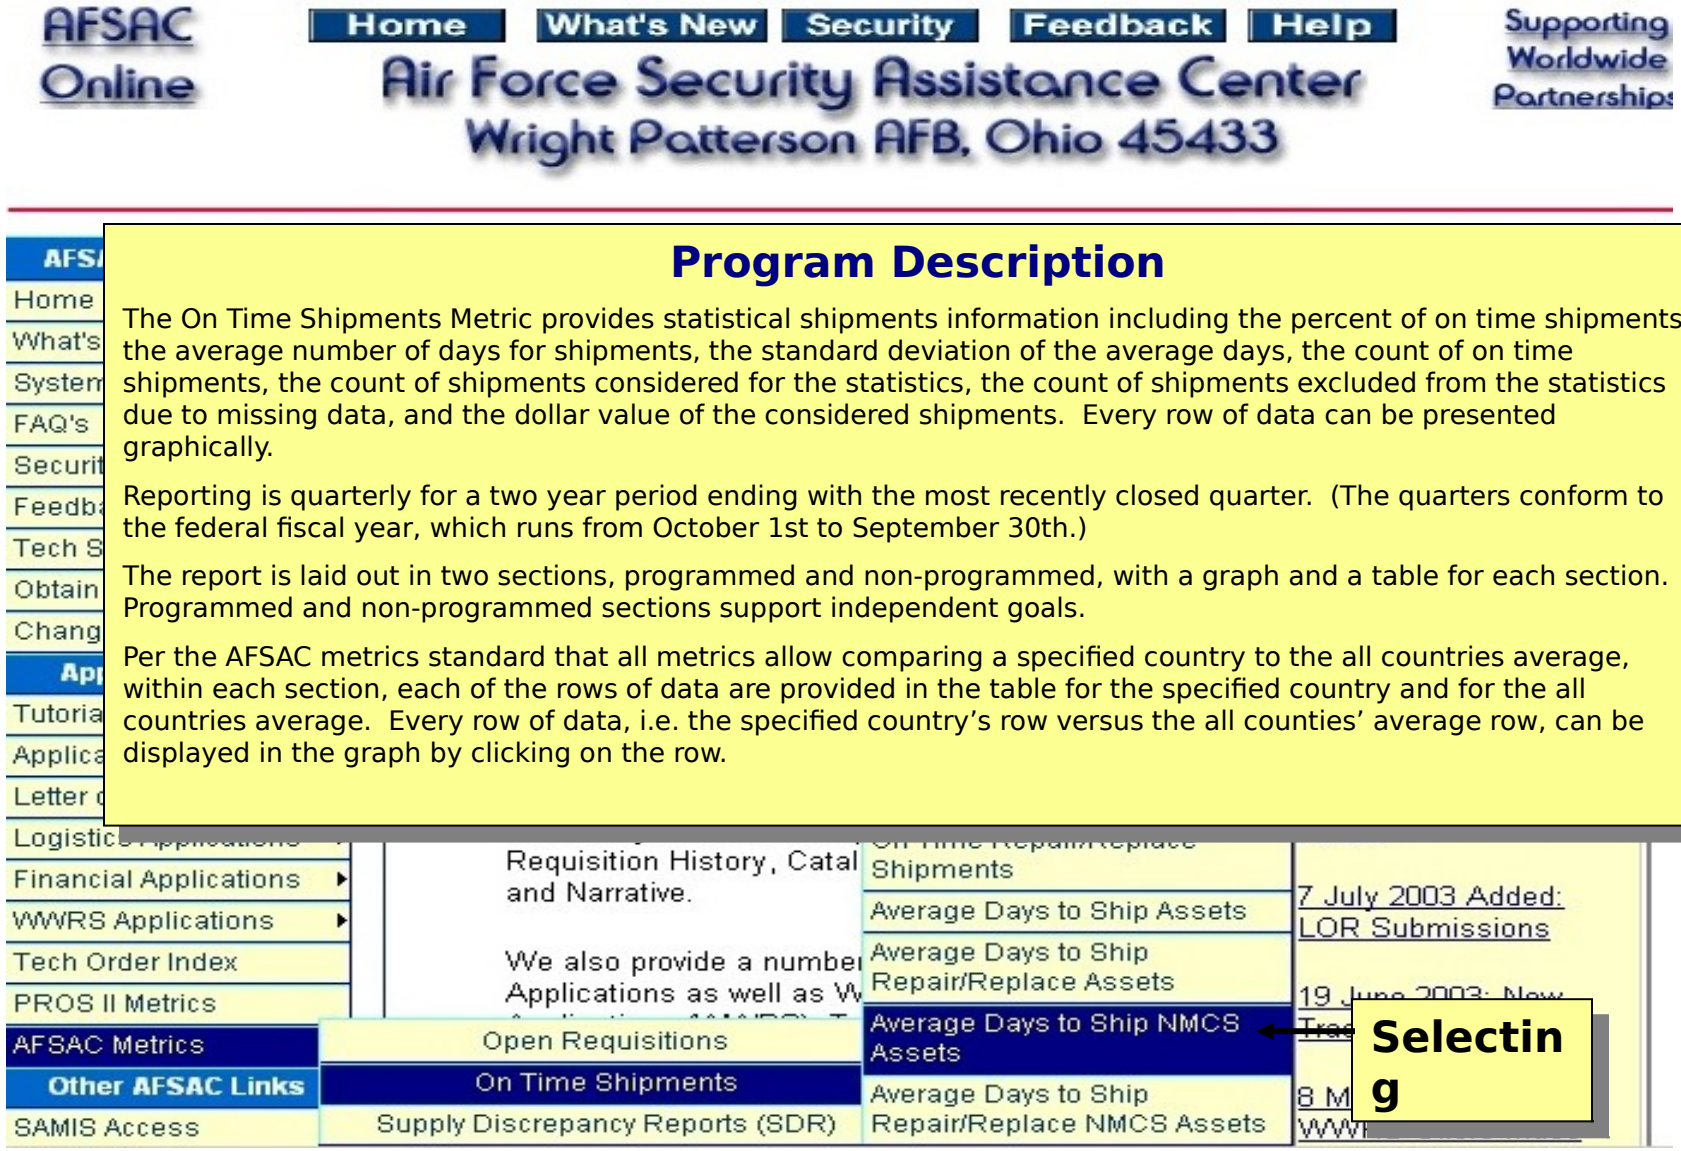
Average Days to Ship NMCS Assets

AFSAC



Program Description

The On Time Shipments Metric provides statistical shipments information including the percent of on time shipments, the average number of days for shipments, the standard deviation of the average days, the count of on time shipments, the count of shipments considered for the statistics, the count of shipments excluded from the statistics due to missing data, and the dollar value of the considered shipments. Every row of data can be presented graphically.

Reporting is quarterly for a two year period ending with the most recently closed quarter. (The quarters conform to the federal fiscal year, which runs from October 1st to September 30th.)

The report is laid out in two sections, programmed and non-programmed, with a graph and a table for each section. Programmed and non-programmed sections support independent goals.

Per the AFSAC metrics standard that all metrics allow comparing a specified country to the all countries average, within each section, each of the rows of data are provided in the table for the specified country and for the all countries average. Every row of data, i.e. the specified country's row versus the all counties' average row, can be displayed in the graph by clicking on the row.

SDR Submission Rate

AFSAC Online

Home | What's New | Security | Feedback | Help

Air Force Security Assistance Center
Wright Patterson AFB, Ohio 45433

AFSAC
Supporting Worldwide Partnerships

Program Description

The SDR Submission Rate metric depicts the SDR submission rate for shipments that occurred during the reporting period, which is two years. Reporting is based on quarters, with SDRs matched to the quarter of their shipments. Since customers have a year to submit SDRs, the most recent four quarters of data will fluctuate. The most recent year is highlighted to note this fluctuation.

Since the SDRs are matched to the shipments, the submission rate shows you the quality of shipments, rather than the activity of your submission personnel. For example, if a SDR is submitted this quarter for a shipment from a year ago, it will show up as a submission for the quarter a year ago. This allows us to identify problems with the quality of shipments.

Total Shipments, SDR Submissions (for those shipments), SDR Rate, and Dollar Value are displayed for both the country and the all countries average. Any row of the tabular data can be graphed by clicking on it. The country's data is always compared to the all countries' average in the graph, and whichever rows of data are graphed are also highlighted in the table.

Details are available for the country data. AFSAC personnel can see reports and details for regions or all countries.

Supporting Worldwide Partnership

Air Force Security Assistance Center
Wright Patterson AFB, Ohio 45433

Program Description

Since the On Time Approvals / Denials / Advisories were so similar, they were consolidated into one metric: SDR On Time Decision. The metric shows breakdowns of how many of your SDRs were approved, denied, and advisory, as well as how AFSAC performed with respect to its On Time goals.

Count Completed, Percent Approved, Percent Denied, Percent Advisory, Count Approved, Approved Value, Count Approved On Time, Percent Approved On Time, Count Denied, Denied Value, Count Denied On Time, Percent Denied On Time, Count Advisory, Advisory Value, Count Advisory On Time, & Percent Advisory On Time are displayed.

The whole metric can be displayed, or the component metrics (summary, approvals, denials, or advisories) can be displayed individually.

AFSAC Metrics
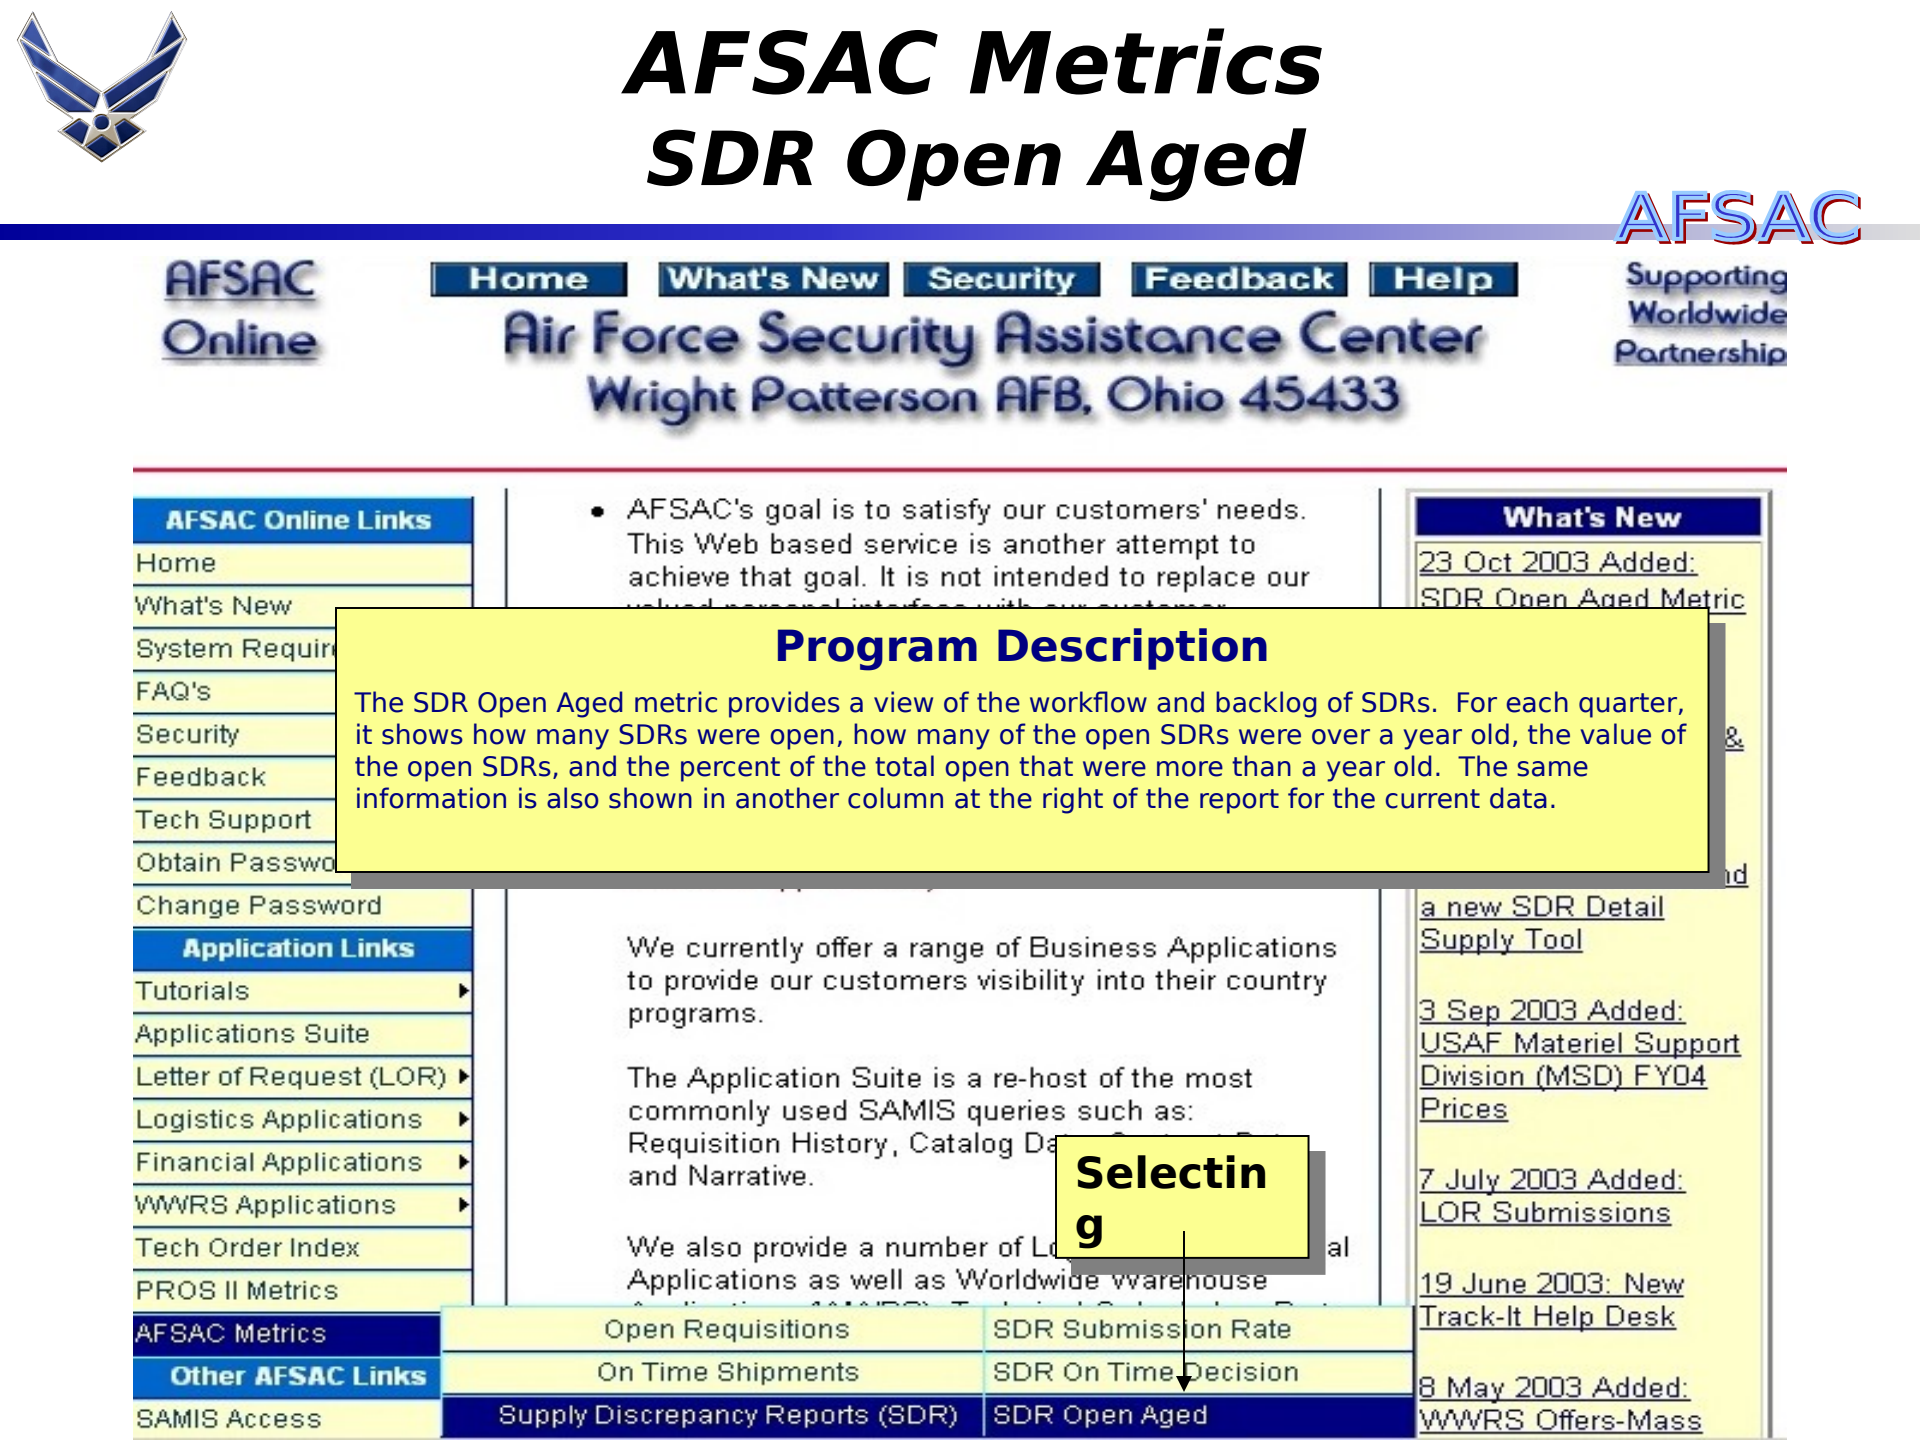
SDR Open Aged



Program Description

The SDR Open Aged metric provides a view of the workflow and backlog of SDRs. For each quarter, it shows how many SDRs were open, how many of the open SDRs were over a year old, the value of the open SDRs, and the percent of the total open that were more than a year old. The same information is also shown in another column at the right of the report for the current data.
